SLIDE 1 OF 5 | EXECUTIVE OVERVIEW

SpendNest Revenue Intelligence Studio — Candidate: Nandhini R

1. Purpose & Strategic Problem

Sales managers review unstructured telephony logs and calendar meetings across disconnected systems. Built by Nandhini R as a resilient single-page intelligence workspace consolidating 44 unique records across 30 calls and 14 meetings with 5 automated routing queues.

2. Candidate Profile & Evaluation

Candidate: Nandhini R (nandhinirameshn66@gmail.com) | Evaluation Date Context: 21 August 2026 (Asia/Kolkata). Live URL: https://nandhini-rsk.github.io/Volopay_Assignment/ | GitHub: https://github.com/nandhini-rsk/Volopay_Assignment. Offline execution with verified replay guarantees.

SLIDE 2 OF 5 | MATHEMATICAL & ARCHITECTURAL BASELINE

Architecture, Metric Denominators & Role Separation

1. Transcript Coverage (40.9%)

18 usable texts / 44 total unique records = 40.91% post-update (17/44 = 38.64% pre-update). Calls: 10/30 (33.3%), Meetings: 8/14 (57.1%). Denominators strictly preserve silent dials to avoid artificial metric inflation.

2. Call Connection Rate (36.7%)

11 calls with is_connected=true / 30 total calls = 36.67%. However, only 8 calls resulted in substantive human dialogue (26.7%). Shows carrier connection vs actual sales dialogue gap.

3. Rep vs. Organizer Separation

5 Verified Call SDRs (Arun, Leela, Meera, Kiran, Dev) vs 10 Calendar Coordinators (team06-team14). Coordinators are administrative organizers, not confirmed sales reps.

SLIDE 3 OF 5 | GROUNDED EVIDENCE

Three Evidence-Backed Findings from Source Transcripts

Finding 1: Vendor Misclassification (M02)

LedgerBridge calendar meeting titled like an outbound deal. Verbatim evidence (Turns 1, 2, 30) proves LedgerBridge is an e-invoicing supplier. Routed to 'Internal / Vendor' to prevent phantom pipeline inflation.

Finding 2: Rep Identity & Boundaries (C06, C09, C10)

C06 metadata lists rep as 'Meera', but audio reveals speaker introducing as 'Ravi here'. C09 contact Vedant strictly forbids using his name; C10 contact Aniket prohibits follow-up calls. Boundary tags added.

Finding 3: Deceptive UI Bugs (M07 Rev 2)

Customer A demonstrated 4 platform defects in screen-share. Turn 15 shows workaround masks invoice upload bug; Turn 21-24 shows amount carryover of INR 18,200. Defect escalation badge created.

SLIDE 4 OF 5 | PRODUCT STRATEGY

Deliberately Rejected Decision & Key Operational Trade-Offs

1. Rejected: Synthetic Pipeline Totals

Considered using regex/NLP keyword parsing to fabricate dollar pipeline totals (e.g. INR 10-13 Lakh in M03, USD 65,000 in M01). Deliberately rejected because DATA_CONTRACT.md forbids inventing revenue without a CRM deal table.

2. Accepted Trade-Off: Qualitative Context

We surface qualitative customer budget bands as context and empower managers with manual routing overrides rather than publishing ungrounded financial figures.

3. Vendor vs Sales Taxonomy

Separated technology supplier evaluations (LedgerBridge M02) and billing training (M10) from outbound sales pipeline to preserve executive decision clarity.

SLIDE 5 OF 5 | QUALITY ASSURANCE

Contract Verification, Architecture & Roadmap

1. 6-Step Replay Verification

Step 1: 44 records loaded. Step 2: Shuffled replay count stays strictly 44. Step 3: M07 route overridden. Step 4: Rev 2 applies to M07 (27 turns, usable count to 18, manual route preserved). Step 5: Stale Rev 1 rejected. Step 6: Full state verified across localStorage reload.

2. Technical Architecture

Pure vanilla ES6+ JavaScript, CSS3 variables, and HTML5 with responsive sidebar layout. Client-side JSON parsing and JSZip export bundling. Author: Nandhini R.

3. Limitations & Roadmap

Single-day snapshot (21 Aug 2026); future roadmap includes webhook integrations with Twilio/Zoom, automated Jira ticket creation for M07 defects, and bi-directional CRM syncing.
